

# Discs.

Each of two discs has numbers written on both faces. The discs are thrown in the air. When they land, the numbers on their uppermost faces are added. The possible totals are 13, 11, 10 and 8.

What could the numbers be on the discs?

How many totals are possible with 3, 4 discs etc.

Are there any patterns, predictions, rules?

Think of a good way to record your ideas.
